The course deals with domestic animals, including both companion animals and livestock.

LEARNING GOALS:

Core Curriculum Learning Goals
This course meets the Core Curriculum requirement for Natural Sciences [NS]. On completion, students will be able to understand and apply basic principles and concepts in the physical or biological sciences, and also to explain and be able to assess the relationship among assumptions, method, evidence, arguments, and theory in scientific analysis.

Program Learning Goals – See https://animalsciences.rutgers.edu/undergraduate/mission.html for the program learning goals (PLGs).
1. Gain broad knowledge of the Animal Science discipline to understand the future of the field and its diversity. (PLG 1)
   Assessment: Three hourly exams
2. Apply biological and chemical principles and quantitative reasoning to concepts presented in core subject areas in Animal Science such as physiology, nutrition, genetics, and reproduction. (PLG 2)
   Assessment: Three hourly exams

3. Develop an understanding of the principles of animal welfare and ethical treatment of animals. (PLG 7)
   Assessment: Three hourly exams

**Course Learning Goals**
By the end of this course you will
1. Gain an appreciation of the contributions that animals and animal products make to human well-being
2. Understand the role that basic and applied science plays in modern-day animal science
3. Obtain an overview of the varying Animal Science fields and their application to both companion animals and livestock.

ACADEMIC INTEGRITY
The university's policy on Academic Integrity is available at http://academicintegrity.rutgers.edu/academic-integrity-policy. The principles of academic integrity require that a student:
• properly acknowledge and cite all use of the ideas, results, or words of others.
• properly acknowledge all contributors to a given piece of work.
• make sure that all work submitted as his or her own in a course or other academic activity is produced without the aid of impermissible materials or impermissible collaboration.
• obtain all data or results by ethical means and report them accurately without suppressing any results inconsistent with his or her interpretation or conclusions.
• treat all other students in an ethical manner, respecting their integrity and right to pursue their educational goals without interference. This requires that a student neither facilitate academic dishonesty by others nor obstruct their academic progress.
• uphold the canons of the ethical or professional code of the profession for which he or she is preparing.

Adherence to these principles is necessary in order to ensure that
• everyone is given proper credit for his or her ideas, words, results, and other scholarly accomplishments.
• all student work is fairly evaluated and no student has an inappropriate advantage over others.
the academic and ethical development of all students is fostered.

the reputation of the University for integrity in its teaching, research, and scholarship is maintained and enhanced.

Failure to uphold these principles of academic integrity threatens both the reputation of the University and the value of the degrees awarded to its students. Every member of the University community therefore bears a responsibility for ensuring that the highest standards of academic integrity are upheld.
